Subject Index

A	Andes mountains, 187
AAIW. See Antarctic intermediate water	Angular momentum, 176
Absorption	Annual mean temperature, 307
band, 59	profiles, 5
line, 59	Antarctica, 419
rate, 64–65	Antarctic ice sheets, 420
selective, 54	Antarctic intermediate water (AAIW), 222
Acceleration, of gravity, 173	Anthropogenic aerosols and climate, 403
Adiabatic lapse rate, 15	cloud abundance, 403
Aerodynamic drag formula, 113	cloud condensation nuclei (CCN), 403
Aerodynamic formulas, 117, 143	radiative properties, 403
Aerodynamic transfer coefficients, 117	Anticyclones, 168
Aerosols, 49, 107, 366	AOGCM. See Atmosphere-ocean general
anthropogenic emissions of, 368	circulation model (AOGCM)
atmospheric, 366	Aquifer, 131
biogenic, 370	Arctic Ocean, 197
black carbon, 368	halocline, 197
gas-to-particle conversion, 369	Arctic ocean, 136
Junge layer, 372	Arctic sea ice, 410, 419
liquid suspension, 366	Arid lands, surface environment of, 190
non-cloud, 366	Atlantic Meridional Overturning
precursors, 369	Circulation (AMOC), 286
primary, 368	Atlantic Multidecadal Oscillation (AMO), 255
sea-salt, 370	structure of, 257
secondary, 370	Atlantic ocean, 136
water, 366	Atmosphere, 95, 195
Africa, wet season in, 190	angular-momentum balance, 176
Agricultural potential, 20	carbon dioxide content of, 290
Air humidity, 120	chemical characteristics of, 195
Air, molecular diffusivity of, 141	as communicator, 159
Air-pollution, 2	energy balance of, 160
Air–water interface, 131	energy fluxes for fluid motions, 96
Albedos, 294	horizontal flux of energy, 160
for dry and moist soil surfaces, 106	large-scale circulation patterns and
of Earth, 294	climate, 180
feedback effect, 305	desert climates, 184
of ice and snow, 304	monsoonal climates, 183
seasonal variation of, 304	tropical wet and dry climates, 189
surface temperature, dependence of, 295	wet climates, 187
Amazon Basin, 187, 404	meridional transport of energy, 161
Amazon rain forest, 404	eddy circulations and meridional
Amazon river, 187	transport, 168
AMO. See Atlantic Multidecadal Oscillation	vertically averaged meridional energy
AMOC. See Atlantic Meridional	flux, 171
Overturning Circulation	water flux in. 170

Atmosphere (cont.)	В
wind components on spherical earth, 162	Biogeochemical feedbacks, 318
zonal mean circulation, 163	CO ₂ , concentration of, 318
meridional water flux in, 170	glacial maximum, 318
space and time scales phenomena, 162	global cooling, 318
Atmosphere-ocean climate	growth rate, 320
model, 415	homeostasis, 319
Atmosphere-ocean general circulation	parabolic function, 320
model (AOGCM), 325	planetary albedo, 320
Atmospheric boundary layer, 107	steady-state solutions, 320
neutral, 111	surface waters, 318
sensible/latent heat fluxes, 115	Bioturbation, 270
equilibrium bowen ratio for, 117	Blackbody emission
stratified, 113	Planck's law, 53–54
Atmospheric column, net radiative heating	spectra, 51
of, 160	Boundary conditions, 234
Atmospheric composition, 6–9	aerosol emissions, 234
carbon dioxide, 6	solar variability, 234
dry atmospheric air, 6	volcanic eruption, 234
molecular nitrogen, 6	Boundary layer, 111
ozone, 6	logarithmic velocity profile, 112
water vapor, 6	molecular diffusion, 115
Atmospheric energy, 171	turbulent fluid motions in, 115
anounts of, 173	Boundary-layer clouds, 110
balance, 160	Boundary-layer physics, 110
latent heating, 160	Bowen ratio, 118, 143
radiative heating, 160	Bucket model, 147, 156
sensible heating, 160	Buoyancy, 15
internal, 171	С
kinetic, 171	-
potential, 171	Carbon cycle, 21, 276
Atmospheric gases, emission by, 54–55	Carbon dioxide (CO ₂), 21, 140, 195, 398
Atmospheric humidity, 11–13	fossil carbon source, 401
exponential increase of saturation pressure, 13	global carbon cycle, schematic of, 400 human activities, 399
partial pressure of water vapor, 12	organic solids, 195
specific humidity at saturation, 12	preindustrial atmosphere, 401
temperature dependence of saturation	turnover time, 401
pressure, 12	Carbonyl sulfide (COS), 372
Atmospheric molecules, 59	Cartesian coordinate system, 162, 163
Doppler broadening, 61	Cavity radiation, 30
hypothetical line spectrum, 60	blackbody radiation, 30
natural broadening, 60	Stefan-Boltzmann law, 30
pressure broadening, 60, 61	thermodynamic equilibrium, 30
visible radiation, 62	CCN. See Cloud condensation nuclei
wavelengths of vibrational modes, 59	(CCN)
Atmospheric motions, 160	Cereal grains, 20
Atmospheric temperature, 3	CFCs. See chlorofluorocarbons
main zones of, 4	Chlorofluorocarbons (CFCs), 224
thermodynamics, 13	Chlorophyll, 102
first law of, 14	Clausius-Clapeyron rate, 146, 356
Average temperature, 1	Clausius-Clapeyron relation, 12, 297

Climate, 1	Planck and water-vapor feedback, 344
factor, 2	water-vapor feedback, 343
fluctuations, 2	historical development, 326
forcing, 294	computer models, 326
humans effect, 404	numerical weather prediction, 326
atmosphere, radiative cooling of, 404	oceanic model, 327
climate forcing, 404	land component, 334
cloud-adjusted effective radiative	mathematical modeling, 325
forcing (ERF), 404	atmosphere-ocean general circulation
global temperature, 404	model (AOGCM), 325
stratosphere	earth system model (ESM), 325
cooling of, 404	ocean component, 335
radiative forcing (RF), 404	physical components, schematic diagram
top-of-atmosphere (TOA) radiation, 404	of, 329
well-mixed greenhouse gases	sea ice models, 336
(WMGHG), 405	simulations, validation of, 340
importance of, 1	thermohaline circulation, 356
maritime areas, 127	Climate science, 410
Climate changes, 293	attribution, 410
forecasting of, 293	detection, 410
natural forcing of, 361	Climate sensitivity, 5, 293
continental drift, 361	feedback mechanism, 293
human-induced climate changes, 361	positive feedback, 293
solar luminosity, 361	Climate system, 133, 234
total solar irradiance (TSI) changes, 361	boundary conditions, 234
volcanic eruptions, 361	Climatological zonal averages, 164
polar amplification of, 313	value, 306
time-dependent, 412	Cloud albedo, 371
anthropogenic forcing, 412	Cloud condensation nuclei (CCN),
climate forcing, 412	366, 403
CO ₂ concentration, logarithm of, 413	oceanic, 371
human activities, 412	Cloud feedback, 317
perturbation temperature, 413	cloud types, distribution of, 318
Climate intervention, 422	energy balance, 317
CO ₂ emission pathway, 422	radiative energy flux, 317
Earth, geoengineering climate of, 422	Cloudiness, 1
Climate models, 99, 113, 293, 325	Clouds, 74–77
atmospheric component, 329	annual average cloud fractional area
conservation equations, 330	coverage in, 91
convection and cloud	dependence of cloud albedo and cloud
parameterization, 332	absorption on, 76
planetary boundary-layer	dependence of longwave emissivity on, 77
parameterization, 333	dependence of planetary albedo on, 77
radiation parameterization, 331	forcing for cloud types, 86
coupled atmosphere-ocean processes, 356	model calculations of cloud albedo, 76
feedback strength and sensitivity	model for net radiative effect of
estimates, 342	cloudiness, 87-89
cloud feedback, 347	properties used to compute, 84
hydrologic cycle feedback, 353	and radiation, 74–77
ice–albedo feedback, 351	real clouds, observations of, 89–92
model energetic feedbacks, summary	role in energy balance of Earth, 83–87
of, 352	variations of albedo, 76

Condensation	Downward longwave fluxes, 126
latent heat of, 160	Downward longwave radiation, 120
of water, 2	Drake passage, 202
Conservation equations, 330	Dry air, specific heat of, 98
hydrostatic balance, 330	Dry-gets-drier paradigm, 356
parameterizations, 331	Dry lands, global distribution of, 185
primitive equations, 330	Dynamical feedbacks, 311
sigma coordinate, 330	_
sub-grid- scale phenomena, 331	E
Conservation of energy, 13	Earth, 2, 3, 25
Convection, 235	axis of rotation, 27
boundary layer, structure of, 108	energy balance of, 27
and cloud parameterization, 332	cavity radiation, 30
convective motions, 332	emissivity, 30
precipitation, intensity of, 332	energy flux, 29
latent energy, release of, 242	first law of thermodynamics, 27
turbulence, 108	irradiance, 29 solar constant, 29
Coriolis parameter, 212 COS. See Carbonyl sulfide (COS)	
Cryosphere, 20, 131	energy emission, 51 local albedo of, 39
estimated global inventory, of land and	ocean system, 97
sea ice, 21	planetary albedo, 31
Cumulonimbus clouds, 138	polar regions, 2
Cyclones, 168	radiative emission of, 25
waves, 168	rapid rotation of, 163
,	surface of, 95
D	climate, 2, 293
Daisyworld model, 322	water volumes of, 132
Death valley, 4	Earth's climate, history of, 261
Decadal variations of weather, 254	Chinese literature, ancient, 261
Deep thermohaline circulation, 221, 230	climate information, 261
Deforestation, 404	climatic variables, 261
Desert	early earth, 272
climates, 184	albedo effect of global ice cover, 276
Deserts	Atlantic Meridional Overturning
diurnal variation in, 186	Circulation (AMOC), 286
Dewfall, 138	bipolar seesaw, 286
Dimensional analysis, 113 Dimethylsufonium propionate (DMSP), 371	carbon cycle, 276
antifreeze, 371	carbonic acid, 276 carbon pool, 276
antioxidant, 371	cenozoic glaciation, 274
bacterial energy source, 371	coal and oil deposits, 278
herbivores deterrent, 371	continental plates, movement of
osmolyte, 371	the, 279
Dimethyl sulfide (DMS), 369	continental positions and sea level
Distribution of insolation, 36	during the Cretaceous period 94
Diurnal cycle, 186	Mya, 277
Diurnal variations, 153	Dansgaard-Oeschger (D-O) events,
DMS. See Dimethyl sulfide (DMS)	285
DMSP. See Dimethylsufonium propionate	dimethyl sulfide (DMS) emissions, 282
(DMSP)	d ¹⁸ O from the NGRIP ice core from
Doppler effect, 55	Greenland, 285

Drake Passage, 279	thermometer, use of, 262
Dryas octopetella, 284	time series of annual mean temperature
estimates of temperature, CO ₂ , CH ₄ ,	anomalies, 263
and dust from ice cores drilled at	natural recording systems, 261
dome c in Antarctica, 283	paleoclimatic data, 261
formation of, 272	paleoclimatic record, 266
geologic ages, major, 275	aerosol chemistry, 271
glacial-interglacial swings, period of	air bubbles in ice, 271
the, 279	annual tree rings, 266
greenhouse gases, 282	bioturbation, 270
gulf stream, 280	heavy isotopes (18O), rich mixture of,
Heinrich events, 286	270
K–T boundary, 278	lake sediments, 266
lighter isotopes, sequestration of, 276	ocean oxygen isotope record from
little ice age, 289	ocean cores, 271
maps of ice sheets and elevation above	ocean sediment core, 270
sea level, 281	oxygen isotopes, relative abundance
nature of Younger Dryas event and the	of, 270
Bölling warm event, 287	paleoclimatic data sources,
neoproterozoic glaciations, 275	characteristics of, 267
nitrogen oxides, 278	pollen spores, 266
north Atlantic deep water (NADW), 284	power spectra of the variance of the
outgassing, 272	oxygen isotope record, 272
paleozoic glaciations, 276	sea creatures, shells of, 270
primordial atmosphere, 272	sea surface temperature (SST), 270
quaternary period, 279	stable isotopes, anomalies in, 271
snowball earth, 275	standard mean ocean water, 270
snowball period, 276	weather information, 266
Tethys Ocean, 277	Earth's land area, 21
thermohaline circulation, 286	Earth system model (ESM), 325
Younger Dryas, 284	Eastern Boundary Currents, 214
historical record, 265	annual mean SST and deviation of the
agricultural data, 265	annual mean SST From Its zonal
archeological evidence of cities, 265	average at each latitude, 215
Ephesus, city of, 265	Eddy fluxes, 168, 178
historical climate information, 265	Effective heat capacity, 97
paleoclimatic evidence, 266	Effective radiative forcing (ERF), 404
rock paintings, 266	Ekman Layer, the, 216
Sahara desert, 266	Electromagnetic radiation, 50–51
